

SPECIALTIES - CHEMICAL INGREDIENTS

.....

Diisobutene (DiB), Butanol-tert. (TBA) and Trimethylhexanal (TMH) are high-purity intermediate products for the synthesis of organic peroxides, of antioxidants, agricultural chemicals, resins, pharmaceuticals, fine chemicals, organic acids, fragrances, lubricants, polyurethanes or solvents.

SPECIALTIES - PHARMA, COSMETIC AND SURFACTANT INTERMEDIATES

.....

DRIVERON® S, DRIVOSOL® and isotridecyl alcohol (ITDA) are used in the pharmaceuticals and cosmetics industries and also in the production of surfactants.

SPECIALTIES - TECHNICAL SPECIALTIES

.....

Our oxo oils HS9, LS9 and LS13 and our linear oligomers Di-n-Butene, Tri-n-Butene, Tetrabutene and Tetrabutane are used in numerous industrial sectors, be it as important intermediate products or as components in water treatment, as thinners or agents in the textile industry, in paper manufacture or metal processing.

PERFORMANCE INTERMEDIATES

PERFORMANCE INTERMEDIATES – CHEMISTRY4PEOPLE

WHO WE ARE

We are a major producer of C4-based materials for the rubber, plastics and specialty chemicals markets

OUR COMMITMENT

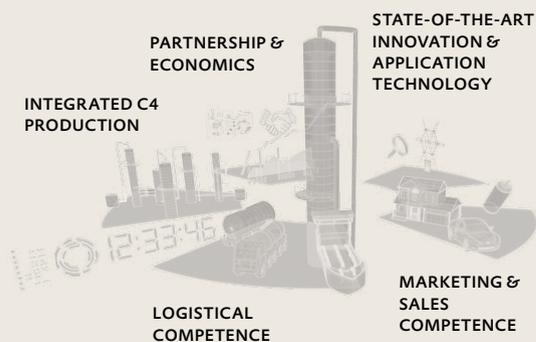

We offer a lot more than just our products:

- Supply chain competence
- Technology leadership, and
- Market & customer focus

OUR VISION

Chemistry4People
We create the future of C4Chemistry together
with our customers

OUR CORE COMPETENCIES

PERFORMANCE INTERMEDIATES WE SERVE VARIOUS MARKET SEGMENTS

RUBBER & PE MONOMERS

Butadiene is a key monomer in the production of synthetic rubbers and lattices. In the European market, we are the leading supplier of Butene-1. The product is mainly used in the production of high-quality plastics such as polyethylene and poly(1-butene).

FUEL COMPONENTS

MTBE (DRIVERON®) is used as an anti-knocking agent in gasoline fuels and is an enabler for cleaner fuels worldwide. Isobutene is a versatile intermediate for the production of various fuel and lubricant additives, synthetic rubbers and specialty chemicals like e.g. fragrances and antioxidants.

OXO ALCOHOLS

Our oxo alcohols isononyl (INA) and 2-propylheptanol (2PH) are important raw material components in the manufacture of plasticizers. 2-PH is also used in the production of surfactants.

PLASTICIZERS

With the addition of plasticizers, polymeric materials such as PVC become flexible and supple for further processing and use. Our plasticizers are manufactured on the basis of isononyl alcohol (INA), and are used primarily for the manufacture of soft-PVC products and in industries such as construction and automotive industries for example.
